

Homework

1. Can a machine with a single DNS name have multiple IP addresses? How could this occur?
2. A binary file is 4560 bytes long. How long will it be if encoded using base64 encoding , with a CR+LF pair inserted after every 110 bytes sent and at the end?
3. When Web pages are sent out, they are prefixed by MIME headers. Why?
4. How do you make an image clickable in HTML? Give an example.
